

Hi there,

We get it — your to-do list is never-ending, your inbox is overflowing, and keeping up with TiDB's latest developments hasn't been a top priority. Let's fix that:

- [Built-in vector search](#) is available in Public Beta, putting TiDB on the path to becoming the AI database of choice.
- TiDB Cloud now supports [OAuth 2.0](#), which makes it a breeze to sign in with SSO, while also reducing your password worries.
- [Chat2Query](#) — TiDB's AI-powered SQL generator — is now even better at interpreting natural language queries and handling the biggest of datasets.

Airbnb, Pinterest, and Databricks all rely on TiDB. Book a demo and see what TiDB can do for you.
